DETAILED ACTION

This is the second office action for U.S. Application 10/522,446 for a Mounting System for a Vehicular Mirror filed on January 19, 2005. Claims 1-22 are pending.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, 4-6, and 9-19 rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent 6,039,449 to Dolan et al. Dolan et al. discloses a side-mounted rearview mirror assembly with a mirror housing (15) enclosing a mirror case supporting a reflective element and a support base (13) with a mounting panel (part that 17 is mounted on) for mounting the mirror. There are three hook assemblies (25...34 and 36) extending from the mounting panel that could engage three sockets mounting the mirror assembly to a vehicle by translating the panel relative to the socket. There is a resilient flip seal (the inner portion of 19... also could be described as a flexible, removable door for covering the access opening at 17) extending along at least a portion of the perimeter of the support base, the resilient seal being integral with the panel and being a trim frame adapted for mounting over the support base when the mirror is mounted to a vehicle. The mirror has a pivot point at an outboard end for adjust the horizontal and vertical tilt and has a power pack mounted to an inboard end of the mirror case (the

wiring tail). With respect to claim 13, there is a side panel (part that contains 12) with a socket (12), and the hook is adapted to be slidably received within the socket when the hook and socket are operably aligned with one another and the panel is moved forwardly with respect to the side panel so that the hook is received within the socket. There is at least one fastener (17) fixedly mounting the mounting panel to the side panel, the fastener extending through aligned apertures in the mounting panel and the side panel and the seal can form an effective barrier against wind and water ingress when the mounting panel is mounted to the side panel.

Allowable Subject Matter

Claim 3, 7, 8, and 20-22 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

U.S. Patent 6,116,743 to Hoek

U.S. Patent 6,213,609 to Foote et al.

U.S. Patent 6,239,928 to Whitehead et al.

U.S. Patent 6,276,808 to Foote et al.

U.S. Patent 6,390,635 to Whitehead et al.

U.S. Patent 7,195,382 to Foote

U.S. Patent 7,270,430 to Olijnyk et al.

The above patents disclose mirror mounting assemblies.
